

## What's going on?

Contributed by Michael Felt

Been a long while since I worked a blog like entry. But so much is going on that it should not be too difficult for the coming weeks.

So what's going on with me? Keeping it limited to AIX and POWER the keywords/tokens are:

CAA - Cluster Aware AIX

HACMP (aka PowerHA, SystemMirror) and

GLVM

My goal is to be doing some writeup's soon.

Almost forgot: Versioned WPAR support for AIX 5.3!
