

Installing LDAP - should be easy

Contributed by Michael Felt

LDAP and AIX

This combination has been around for over 10 years, and somehow I have managed to not use it since I first learned it in 2001 and 2002. And I thought it would be easy to pick up where I left off. Not so, unfortunately. Where a simple command "did it all" over 10 years ago now everything is bigger and better - except for the error messages.

Good news is: I am making progress and writing down the little details as I prepare a presentation: LDAP 101 - How to Install LDAP for AIX. And then it will be easy - I promise!
