

RSCT change in PLinux, PowerVC reset-rmc cloud-init module won't work

Contributed by Ozan Uzun

Just a quick reminder that the new rsct package (rsct.core-3.2.1.1-15343) has some changes and reset-rmc cloud-init module is not working at the moment.

`/usr/sbin/rsct/install/bin/recfgct` address has been changed to `====> /opt/rsct/install/bin/recfgct`

I already contacted support team, and it will be fixed very soon.
